### III. Comments – Inspection Narrative

- *Document the area of the permit inspected*
- *Discuss observations made during the inspection*
- *Document the results of any field tests taken*
- *Provide a summary of any discussions with industry representatives, along with results, and expectations from those discussions*
- *Describe any enforcement action taken during the inspection, along with facts or evidence supporting the enforcement action*

There is no current drilling activity at UEC Permit No. 123B. Leases P2-07 and 33100 were examined to determine the quality of site restorations. Borehole P2-07-13 on the Colvert property is seen in Photo 1 as it appeared on 8-14-08 and is considered typical of the drilling locations in this area of UEC's operations. The same area as documented in Photos 2-3 on 4-23-09 where little evidence of past drilling activity is visible in spite of the persistent drought conditions hampering re-vegetation. The PVC markers have been removed after the boreholes were individually inspected for compliance to the permit requirements and a short piece of steel rod inserted into the remaining hole for future re-location with a metal detector if required. Photos 4-5 document the typical appearance of the site restorations at Lease 33100 on the Gram property. Future inspections will continue to focus on issues relating to site restoration.

**Project Name:** Weesatche  
**Permit Number:** 123B  
**Inspection Date:** April 23, 2009
